EDUCATION

Istanbul Technical University, Control and Automation Engineering 2022–

University of Kassel ,Germany, Erasmus Exchange Program 04.2025-09.2025

Hüseyin Avni Sözen Anadolu Lisesi, İstanbul 2017-2022

EXPERIENCE

Robotics Intern (Hybrid)

Aware Robotics (Nov 2025 – Jan 2026)

- Working on TÜBİTAK-supported R&D projects for legged robotic systems. • Developing and validating legged robot control algorithms in ROS2 simulation environments. • Working on elevation mapping and terrain representation for navigation over uneven terrain.

Machine Learning Researcher

University of Kassel /Germany (May 2025 – September 2025)

- Conducted research on ensemble regression models focusing on diversity–accuracy trade-offs. • Designed and tuned machine learning models using automated hyperparameter optimization techniques. • Ran large-scale computational experiments on high-performance servers. • Contributed to an academic paper and technical report based on research findings.

Autonomous Robot Developer

Machine Arge, Yıldız Teknopark (June 2024 – March 2025)

- TÜBİTAK-approved R&D project focused on autonomous ground vehicle development. • Developed ROS-based autonomous navigation systems including SLAM, path planning, and obstacle avoidance for a ground vehicle platform. • Implemented sensor fusion using Intel RealSense cameras, GPS, and IMU to achieve robust and precise localization in outdoor environments. • Enabled fully autonomous waypoint navigation to GPS coordinates under real-world conditions. • Took primary responsibility for overall system architecture, integration, and performance optimization, improving real-time decision-making capabilities.

ROS Developer

ITU Autobee (September 2022 – October 2023)

- Worked on autonomous marine and robotic systems as part of the ROS team. • Contributed to navigation, perception, and control modules for fully autonomous platforms.
- Achievements:
 - Winner of the 2023 NJORD The Autonomous Ship Challenge.
 - Finalist in the Teknofest TIKa Competition

AI Intern

Generion AI (May 2023 – June 2023)

- Worked on Large Language Models (LLMs) and AI-assisted software tools. • Supported development and optimization of AI-powered workflows and applications.

SKILLS

• Programming:

Skilled in Python, C++, and C with solid experience in AI and robotics applications. Proficient in using Python machine learning libraries for developing, optimizing, and tuning models efficiently.

• Robotics & ADAS:

ROS, SLAM, Path Planning, Sensor Fusion, Computer Vision.

• Simulation & Modeling:

Skilled in using Gazebo and Unity for creating detailed simulations and virtual testing environments.

• Machine Learning:

Model training, ensemble methods, hyperparameter tuning Languages

• Languages

English C1, German A2
